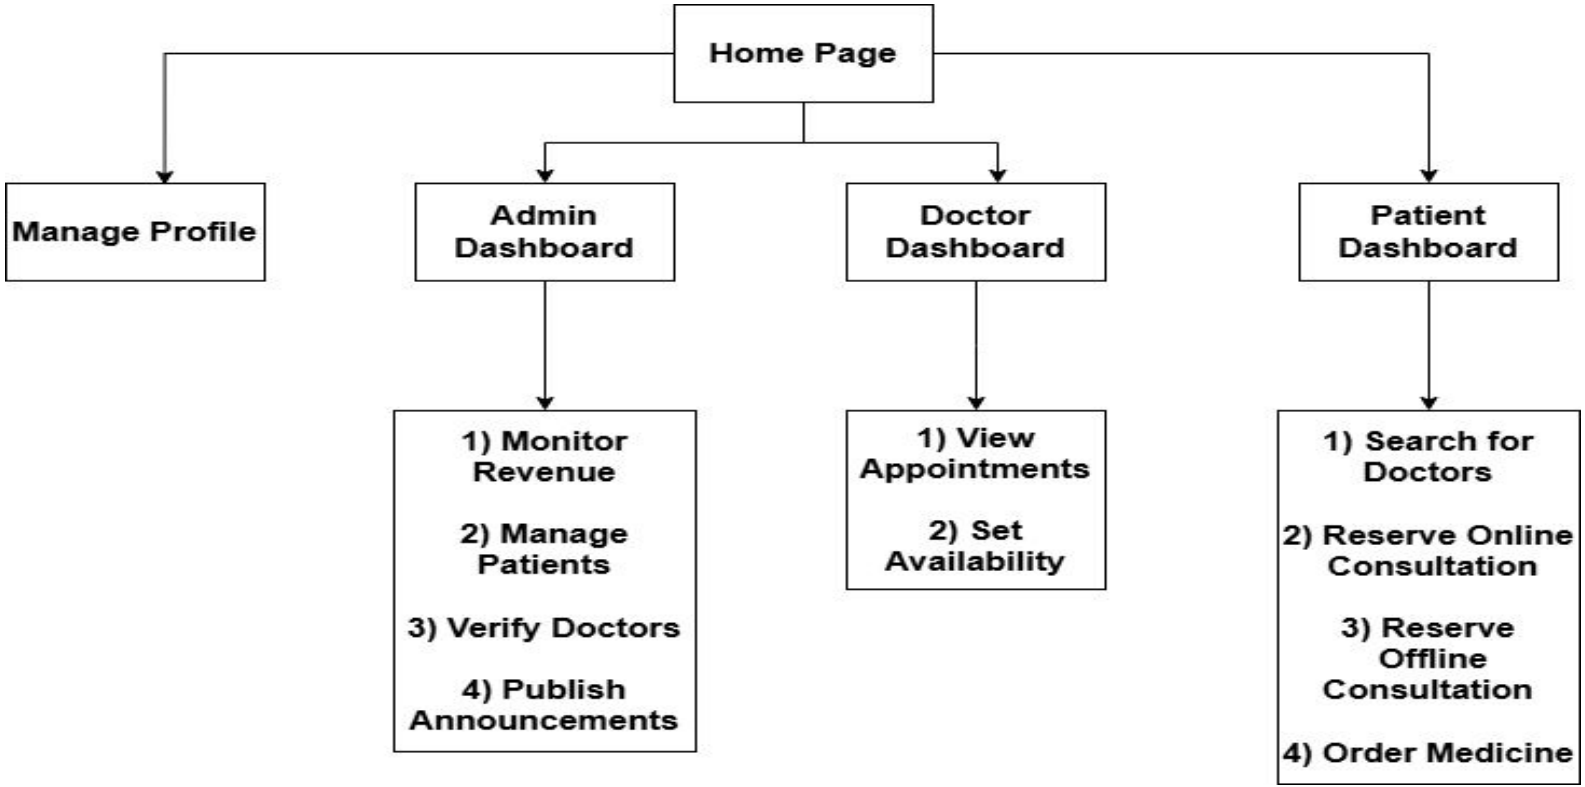
FFSD Presentation

Project Title: “MediQuick”

Abstract Idea of the Project

"MediQuick" **is an advanced telehealth platform designed to connect patients and doctors seamlessly. The platform facilitates online consultations, offline appointment scheduling, and online medicine ordering. This project developed in adherence to Full Stack Development(FSD) track guidelines. Key features include multi-user dashboards, API integrations, and a revenue model, making it scalable and efficient for healthcare providers and patients alike. This platform acts as bridge between patients and doctors as well as a bridge between patients and pharmacy. It makes the process of consultation and treatment easier. It makes it easier for them to seek professional advice.**

Flowchart



Home Page
Manage Profile
Admin Dashboard
Doctor Dashboard
Patient Dashboard
1) Monitor Revenue
2) Manage Patients
3) Verify Doctors
4) Publish Announcements
1) View Appointments
2) Set Availability
1) Search for Doctors
2) Reserve Online Consultation
3) Reserve Offline Consultation
4) Order Medicine

Key Features and Functionality

Core Features:

1. **User Registration:** Doctor and Patient registration with profile management.
2. **Doctor Management:** Add, Update, and manage available slots.
3. **Patient Features:** Search for doctors by specialization and book appointments and submit feedback for doctors.
4. **Appointment Management:** Accept/reject requests, view calendars/events.

Secondary Features:

1. **Admin Portal:** Manage users, announcements, and privileges.
2. **Verification Process:** Validate doctor credentials during registration.

Auxiliary Features:

1. **Blog System:** Share health tips and articles.

Uniqueness of the Project

This platform is unique blend of a booking system and e-commerce tailored for healthcare professionals and patients, offering seamless integration of medical consultations and medicine procurement. It is a unique mixture of booking system and e-commerce in healthcare. It involves combining two different domains for building a more efficient and accessible healthcare system. This platform combines the ease of booking with the functionality of e-commerce, creating a centralized solution for healthcare needs.

Expected Outcomes and Advantages

1. **Simplified Healthcare:** Simplified access to medical expertise, regardless of location.
2. **Easy and Accessible Healthcare:** Promotes inclusivity by bridging the healthcare gap in rural and remote areas, reduces transportation cost and time for patients.
3. **Improved Scheduling for Doctors:** Allows doctors to manage their appointments efficiently with an organized scheduling system.
4. **Enhanced Doctor-Patient Interaction:** Facilitates better communication between doctors and patients via video calls, or follow-up features.
5. **Cost-Effective:** Reduces operational costs for clinics and hospitals, which can translate into affordable healthcare for patients.
6. **Reduced Hospital Overcrowding:** Virtual consultations alleviate the pressure on physical healthcare facilities.
7. **Scalability:** Can accommodate a growing number of users without requiring significant infrastructure expansion.

Technical Aspects

Frontend:

1. **HTML:** For structuring the web pages(e.g., login, registration, appointment booking).
2. **CSS:** For styling the pages to provide a clean and professional look.
3. **CSS Frameworks:** For responsive designs and layout grids.
4. **JS:** For dynamic content and form interactivity, event handling for booking slots, profile updates, etc.
5. **Frontend Framework:** React.js
6. **Templating:** EJS(Embedded JavaScript)
7. **Form Validation:** JavaScript Validation(e.g., empty fields, incorrect formats), Regex Patterns(e.g., email, password, and phone number validation).

Technical Aspects(Contd)

Backend(Server-Side):

1. **Server-Side Framework:** Node.js, Express.js
2. **API Development:** RESTful APIs, GraphQL(Optional)

Database:

1. **Database Type:** MongoDB(NoSQL)
2. **Hosting and Management:** MongoDB Atlas

Authentication and Security:

1. **Authentication:** JWT(JSON Web Tokens)
2. **Security Measures:** Password Encryption, Role-Based Access Control(RBAC)
3. **Data Protection:** HTTPS, Input validation.

Pages

1. **Home Page:** Overview of the website, and providing its key features.
2. **About us:** Information about the website, and the members.
3. **Appointment Booking:** A form for the users to book appointments with doctors and specialists.
4. **Services:** Details about the telehealth services offered.
5. **Doctors:** A list of doctors available with their profiles.
6. **Patient Dashboard:** Manage profiles, view appointments and upload records.
7. **Doctor Dashboard:** Manage appointments, access patient records and consultation notes.
8. **Contact us:** Form for user queries.
9. **FAQ:** Answers to common questions about the page.
10. **Privacy Policy & Terms and Conditions:** legal documentation for privacy policies and user agreements.
11. **Admin Panel:** Manage users, manage services.

Members of the Group

NAGINENI SAI VINEETH - S20230010159

MUTYALA SAI PAVAN KUMAR - S20230010157

NAGOLU SRIMANTH REDDY - S20230010160

GAJJALA SUDHA HARISH REDDY - S20230010085
